

TRANSPARENCY & BRAND INTEGRITY

As part of our sustainability and ethical core values of our brand and products we have put together some specific supplier and product information which underpins our transparency code of practice. This information provides our customers a credible and valuable insight to our supply chain partners. This is offered to ALL parties to allow customers and fellow brands to see exactly who, what, where and how are products are produced before committing to a purchase from MR CHRISTIAN we believe brand integrity and honest information exchange is paramount in our sector if things are to change. We have nothing to hide.

DISCLAIMER

MR CHRISTIAN Takes no responsibility for the accuracy of this information and you are advised if in doubt to make your own enquires. The information presented here is done so in good faith from information freely publicly available online and through our supply chain partners We have collated this information in a single source document so you have an overall picture of our product supply chain.

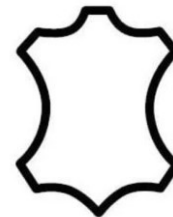

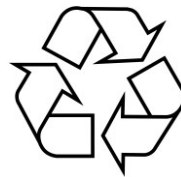

As this is working document we will periodically add information and updates as and when they are notified to us, or we have new products and supply chain partners collaborating with us. We are only human and as such should anyone find any inaccurate information or know of any reason we would need to update the information please contact us in the first instance hello@mr-Christian.com.

LEATHER

As the core underpinning for our brand and products our supplier relationships are paramount in delivering out products in the most ethical and sustainable way. For that reason we only use vegetable tanned leathers in our products.

Vegetable tanning is the most sustainable way to process hides and using only natural extracts from tree barks and other natural resources in the process. No harsh chemicals or heavy metals are used unlike chrome tanning.

We do not use splits, PU bonded or heavily finished leathers. Our leathers are purchased to a specification set by Christian himself. Our products and are as natural as our partners we can make them. All our supplying tanneries are approved and audited by Leather Working group, for their manufacturing process taking all factors into account from traceability of raw hides through to the finished product.

All our tanneries have been awarded the **GOLD** rated certification to ensuring they remain at the highest levels of achievement in this sector. We do not use any tanneries not approved by the LWG.

[About Us](#) | [Leather Certifications](#) | [Leather Working Group](#)

Our supplying tanneries are leaders in waste reduction and recycling of many components that go into processing and supplying our leathers, from water treatment and recycling water usage in the tanning process, solar powered tanneries reducing carbon emissions by the use of standard energy supplies, and recycling of waste materials throughout the process.

Two of our tanneries that we use are listed below:

Sepiciler Caybasi Deri San. Tic. A.S Trading as Sepici Grubu Deri Pazarlama A.S.

Rating:	Gold
Leather Type:	Footwear Leather, Leathergoods Leather, Lining Leather, Split Leather Suede, Chrome Free, Sole leather
Protocol Issue:	6.6.2

CANVAS & WAXED COTTON

Some of our future products coming soon and in development will be primarily based on waxed and cotton canvas. We only have a single source supplier for this material and the company is based in Dundee Scotland. Widely accepted as one of the most respected suppliers in the UK.

[Halley Stevensons: Specialist waxed cotton and weatherproof fabrics](#)

HALLEY STEVENSONS SINCE 1864

The origins of waxed cotton

The concept of waxed cotton was originally developed in the early 15th century by sailors. Scottish North Sea herring fleets operating from east coast ports began treating flax sailcloth with fish oils and grease in an attempt to water proof their sails, keeping them light and efficient. Remnants of these sails were used as capes to withstand the high winds and sea spray, keeping the sailors warm and dry. These capes were the forerunner to the fisherman's slicker.

With care and a commitment to innovation, sailcloth evolved and by the mid 1850's, was made from lighter weight double fold cotton yarns, treated with linseed oil. Early Royal Navy sailing ships and tea clippers were amongst the first to use these light weight cotton sails, famously "The Discovery", that still sits in Dundee's port today. Since 1864, Halley Stevensons have continued this tradition by using by-products from other industries to create innovative new waxed cotton textiles.
